## The EU Data Act

### Details

On 27 November 2023, the EU institutions adopted the **Data Act**. The regulation aims at establishing harmonized rules on “fair access to and use of data”. It is clear already that the Act will go well beyond regulating the “Internet of Things” (IoT).

It will, for example, bring “access by design” and “data sharing obligations” for connected products and related services, and prohibit hurdles for switching between similar cloud computing services.

Our webinar will give an overview on the new rules and will cover:

- Overview
- Connected products and related services
- Data Sharing Contracts
- Cloud Services and other data processing services
- International data transfer
- Data Act vs. GDPR, especially: can GDPR be used to avoid Data Act obligations?
- Fines
- Entry into force
- Q&A

We are looking forward to your questions and participation.

See you online!
